

*Morrone Stadium — UConn Soccer Field (Storrs, CT)*

---

**Problem:**

An older facility, UConn's soccer field had received a lot of play, and showed signs of wear and tear. Earlier retro-fitting of underground irrigation had left trench settlements.

**Solution:**

Championship Turf Services stripped the existing turf with a sodcutter, adjusted the soil's pH, then cultivated the ground. We then laser leveled the field for dual diagonal slope. Sodding was completed on July 1, and play commenced on August 18. A national championship for UConn soon followed.

**Laser grading**

**Ready for play**
